1. Introduction

The Group Tour Booking System is a comprehensive platform designed to streamline the lifecycle of organize group travel. This document focuses specifically on the requirements for the **Consultant** role, who acts as the bridge between the customer and the administrative backend.

2. Purpose

The purpose of this SRS is to define the specific features, interfaces, and constraints for the Consultant module. It ensures that the consultants have the necessary tools to manage inquiries, tailor tour packages, and provide high-quality support to customers throughout the booking process.

3. Scope

The Consultant module includes lead management, personalized itinerary creation, customer communication logs, and booking verification. It integrates with the Admin module for inventory (hotels/transport) and the Customer module for feedback and payments.

4. Objectives

- To reduce the response time for tour inquiries by 40%.
- To provide consultants with a unified dashboard for lead tracking.
- To enable seamless customisation of standard tour packages for specific group needs.
- To maintain a transparent communication history with customers.

5. Functional Requirements

ID	Requirement	Description
FR-C1	Lead Dashboard	Consultants must be able to view and filter new inquiries assigned to them.
FR-C2	Package Customization	Consultants can adjust itinerary items, pricing, and dates for specific customer requests.
FR-C3	Booking Approval	Consultants must verify customer documents and initial payments before final admin approval.
FR-C4	Communication Log	A system to record all emails and calls made to the customer within the portal.

6. Primary Actors of the System

- **Admin:** Manages master data, inventory (flights/hotels), and broad system settings.
- **Consultant:** Handles sales, customer support, and package tailoring.
- **Customer:** Browses tours, makes bookings, and provides travel documentation.

7. Use Case Analysis

Use Case: Tailor Group Itinerary

Actor: Consultant

Description: The consultant selects a base package and modifies specific activities or hotel grades based on group size and budget preferences provided by the customer.

Use Case: Verify Payments

Actor: Consultant

Description: Consultant reviews payment proof uploaded by the Customer and updates status to 'Verified' for Admin review.

8. User Stories

US1: As a Consultant, I want to receive real-time notifications for new inquiries so that I can contact potential customers immediately.

US2: As a Consultant, I want to view the availability of tour slots in real-time so that I don't overbook a group.

US3: As a Consultant, I want to generate a PDF quote for the customer so that they can share the details with their group members.

9. Business Process Diagram (Narrative)

The workflow begins when a **Customer** submits an inquiry. The **Admin** (or system auto-assignment) routes this to a **Consultant**. The Consultant engages the Customer to refine needs, generates a custom quote, and sends it for approval. Once the Customer pays the deposit, the Consultant verifies the transaction, and the **Admin** confirms the booking to lock the inventory.

10. Non-Functional Requirements

- **Performance:** The dashboard should load within 2 seconds.
- **Security:** Consultant access must be restricted via Role-Based Access Control (RBAC).
- **Availability:** The system should be accessible 24/7 with 99.9% uptime.

11. Technical Requirements

- **Frontend:** React.js or Vue.js for a responsive UI.
- **Backend:** Node.js or Python (Django/FastAPI).
- **Database:** PostgreSQL or MongoDB for inquiry storage.
- **Integration:** SMTP for email notifications and PDF generation libraries (like WeasyPrint).

12. Conclusion

This SRS specifies the essential capabilities required for the Consultant role in the Group Tour Booking System. By implementing these features, the organization can ensure professional service delivery and efficient tour management.
